The Jordanian economy: between reality and expectations

الاقتصاد الأردني بين الواقع والمأمول

Mohyi Al Din Abu Al Houl,

Abstract

The global economy engaging in conflict with the three economic and financial crises is unprecedented in terms of economic growth, particularly for emerging economies and developing countries, and the deterioration of indicators of financial strength in international credit markets, particularly in the markets of the United Nations and Europe, and we will try through this research to shed light on Jordan's economy in light of these circumstances, in an attempt to measure their performance through a range of financial and sectoral indicators including economic growth, the researcher employed investigative and deductive analysis methodology, using scholars and thinkers' statements to scrutinise and study subject understudy.

Keywords: Economic Growth, Financial Crisis, Inflation, Gross Domestic Product, Developing Economies.
